NEVERGATE / MINECRAFT JAVA

NG-Verkehrs-System

User manual & complete illustrated catalogue

0.1.0-beta2-dev12 · 17.10.2026

350 entries with original model images, usage and recipes.

14 categories and 29 practical guides.

Minecraft Java 1.20.2 · Forge 48.1.0 · Java 17.

The completed development build is active on MC02. Later work still in progress is not documented as completed.

Images show static inventory models. Dynamic screen text, motion and lighting effects may appear differently in game.

Guides

01 Installation and current version
02 Build roads, signs and signal arms
03 One controller, multiple signals
04 Automatic recognition
05 Pedestrian crossings and buttons

25 Pedestrian, bicycle and ramp demand
26 Service devices, fuel and washing
27 Cards, plates and delivery access
28 Bus routes and stops
29 Warnings, emergency points and operations desk

The full catalogue follows, grouped by category. For shaped recipes, / separates crafting rows and · means an empty slot.

01 / Installation and current version

Minecraft Java 1.20.2 · Forge 48.1.0 · Java 17. MC02 runs 0.1.0-beta2-dev12.

1. Close Minecraft, back up the world and remove older active copies of the same mod.

2. Use the same current file on client and server: ng_verkehr-0.1.0-beta2-dev12.jar.

3. NG Traffic beta2-dev12 and NG Vehicles dev12 are separate mods. Install both matching JARs to use them together.

4. The catalogue contains 350 items in 14 categories. Use the creative inventory arrows to change tab pages.

5. This build is active on MC02. Development/test build, not a stable full release.

02 / Build roads, signs and signal arms

Most parts are oriented according to your viewing direction when placed.

1. Asphalt and markings are full road blocks. Insert the appropriate marked road block; markings are not a thin paint layer.

2. Combine kerbs and island parts by shape. Join guardrail sections with their end and transition pieces.

3. Place a signpost and put the sign panel in a free block space above it. Face it towards approaching traffic. Multiple panels can occupy separate block spaces above one another.

4. For an overhead arm, stack reinforced poles, place the pole-to-arm connection at the top, add straight sections and finish with the hanger. Place the signal immediately below the hanger.

5. Inspect the structure from several sides. Automatic signal recognition uses position and lens orientation, not the actual shape of the road.

03 / One controller, multiple signals

A controller, two signals and the linking tool are enough for a first test.

1. Find the controller and signal linking tool under Signals and accessories.

2. Right-click the controller with the tool first, then click the first signal normally: group A.

3. Sneak-click the second signal: group B. Links are saved. Signals must be within 256 blocks of the controller, and both endpoints must be loaded.

4. Right-click the controller with an empty hand, check the devices and assignments, then choose Start. Sneak + empty-hand right-click directly starts/stops it.

5. In the normal junction program A and B alternate through red-yellow > green > yellow > red. Opposite N/S approaches belong to A, E/W to B. Dedicated turning arrows receive protected phases.

04 / Automatic recognition

A centre, an initial device and a suitable radius replace many individual links.

1. Select the desired controller with the tool and link one initial signal or pedestrian device.

2. Use the same tool to sneak-click a ground block as the junction centre. It must be within 256 blocks of the controller.

3. Choose a radius of 16, 24, 32 or 48 blocks in the controller. Default: 32. The area is a horizontal circle and includes up to 12 blocks of vertical offset from the centre.

4. All traffic signal types, pedestrian signals and buttons in loaded areas are checked about every two seconds. Portable signals are included; standalone road works lamps and arrow boards need no link.

5. Face vehicle signals outward towards approaching traffic and place them at least two blocks away from the centre. New or changed assignments stop the controller. Resolve unclear devices manually, then start.

6. Manual assignments and links to other controllers are preserved. Overlapping detection areas can produce ambiguous results. Chunks are not force-loaded. F3 shows your facing direction: north/east/south/west.

05 / Pedestrian crossings and buttons

Buttons and pedestrian signals belonging to the same crossing need the same A/B assignment.

1. Build the pedestrian signals and buttons for each crossing. Link normally for A or while sneaking for B, or choose Crossing A/B in the controller menu.

2. Place a button against the side of an NG signpost or reinforced signal pole. It mounts directly on the pole. Normal breaking returns both parts; wall and ground placement are also supported.

3. With automatic recognition, pedestrian groups follow their N/S or E/W lens axis. Buttons follow a nearby pedestrian signal on the same controller within eight horizontal blocks and twelve blocks vertically. If none is nearby or the closest lamps are ambiguous, the button axis decides.

4. Right-clicking a linked button requests only its own crossing. Repeated presses do not extend an active green phase. A and B are served in request order, at most once each per inserted batch.

5. Without parallel release, vehicles turn red, followed by at least two seconds of entry clearance, six seconds of pedestrian green by default and four seconds of exit clearance. Vehicle traffic then resumes.

6. Stopping makes pedestrian signals red and clears pending requests. Night flashing does not accept new requests.

06 / Programs, timings and presets

Choose Program at the top of the controller. Changing or loading settings stops it.

1. Junction: N/S = vehicle group A, E/W = B; turning arrows receive protected phases. Set vehicle green to five seconds for a quick test.

2. Pedestrian crossing: vehicle group A serves the road; B and protected turns stay red. For a standalone crossing, link both road directions to A.

3. Road works alternating flow: N/E = A, S/W = B so opposing ends alternate. Signals without an approach assignment use their manually linked A/B group.

4. Vehicle green: 5-120 seconds. Turning green: 5-60 seconds. Pedestrian green: 6-60 seconds. Plus/minus changes vehicle/turn timings by five seconds and pedestrian timing by one.

5. Yellow stays at three seconds and red-yellow at one. Protected turns have two seconds of red entry clearance and two seconds of exit clearance. Required clearances are not shortened.

6. Save your own settings in S1/S2/S3 and load them later. Check them and press Start after loading. The top line shows the current/next phase and remaining time.

07 / Using parallel releases

Enable only when the assignments match the paths you have actually built.

1. Parallel ON permits compatible protected routes together. Every movement in a combined arrow must be compatible; crossing left-turn paths remain separated.

2. Suitable explicit straight-ahead/cycle groups can receive green with their pedestrian crossing. Cross traffic and turning routes stay red during that stage.

3. Ordinary circular vehicle signals with unspecified turning permissions, and unloaded endpoints, prevent parallel vehicle green during the pedestrian stage. The separated safe sequence remains in use.

4. The check uses approach, movement and crossing group. It does not read actual road curves or footpaths. Keep Parallel OFF for offset or unusual junctions and check assignments manually.

08 / Night mode and return to normal

Yellow flashing can be selected manually or according to Minecraft world time.

1. Select Yellow flashing ON in the program view, then start. Vehicle signals flash yellow, pedestrian signals remain red and new requests are blocked.

2. Auto Night ON uses world time from 13000 until before 23000. The world day/night cycle can therefore switch the mode automatically.

3. Returning to normal includes at least two seconds of all-red followed by one second of red-yellow. Start deliberately after changing a manual setting.

4. When stopped, controlled signals show red and the warning flasher is off. A missing or unloaded controller also forces red. Night mode shows zero seconds remaining when no timed stage is running.

09 / Build a complete road works layout

Two portable signals and a short narrow section are enough; a junction is not required.

1. Face a portable signal towards approaching traffic at each end. Each needs two free block spaces vertically. The linking tool can click either its head or base.

2. Connect both to the same controller. With automatic detection, set a centre and check the radius. The head does not create a second device entry.

3. Select Road works alternating flow: for example North = A and South = B. Start and verify that only one end receives green at a time.

4. Place delineators, barriers and fencing along the narrow section. Stack two mesh panels for a tall fence. Use yellow-marked road blocks for temporary markings.

5. Add road works lamps and an arrow board and operate them directly by right-click. They need no link and do not appear in the controller list. Relevant signs are in their respective sign tabs.

6. Breaking a portable signal removes both head and base; normal breaking returns one complete signal.

10 / Operate lamps and arrow boards

These two road works devices operate independently.

1. Place a road works lamp on the ground or above a delineator/barrier. It starts flashing.

2. Right-click the lamp to cycle flashing > off > steady > flashing. Its mode is saved as part of the block state.

3. Face the arrow board towards traffic. Right-click cycles left > right > off > left. Directions are as seen from its front.

4. Yellow flashing lights and arrows are warning information. They do not grant a traffic-signal movement permission or detect vehicles.

11 / Disconnect and rediscover

The live device list updates without reopening the menu.

1. Select a device and press Disconnect. The link is removed and the controller stops. Ordinary automatic scans will not immediately reconnect that position.

2. Disconnect all requires confirmation within five seconds. It clears links and requests and disables both operation and automatic detection. Centre and radius are retained.

3. Rediscover clears those exclusions and scans the existing area again. Alternatively, deliberately relink one device manually.

4. Check and start after rediscovery. Manual assignments and devices linked elsewhere are preserved. Old connections loaded later remain invalid after a full reset.

12 / Set text and parking displays

In this version displays use commands and do not have a dedicated menu yet.

1. Place a digital text display and identify its block coordinates. Enable cheats in single-player or use the relevant server command permissions.

2. Use the text command and replace x/y/z with the actual coordinates. Text is limited to 64 characters and is saved.

3. Place a parking display and set its capacity and occupied spaces with the parking command. Values range from 0 to 99999; occupied spaces are capped at capacity.

4. The display calculates free spaces or shows P BESETZT (full). This is stored manual occupancy, not automatic entry/exit counting. Fixed in-game display wording is currently German.

/ngverkehr text <x> <y> <z> <Text>

/ngverkehr parking <x> <y> <z> <Kapazität/capacity> <Belegt/occupied>

13 / Troubleshooting

Most common issues can be checked directly in the controller.

1. All red: is the controller loaded and running? New devices or changed settings deliberately stop it. Check assignments, then start.

2. Device not found: initial device linked, centre set, Auto ON and radius correct? Within twelve blocks vertically? Facing outward? Use Rediscover for previously disconnected positions.

3. Button requests the wrong crossing: check A/B on BOTH the pedestrian signals and the buttons. Nearby signals can determine automatic button grouping.

4. Portable signals change together: check Road works alternating flow and opposing groups. The normal junction program groups N/S together.

5. No parallel pedestrian green: an ordinary circular signal or unloaded device can require separated operation. Do not use incorrect assignments to bypass that safeguard.

6. For reports include the mod/Minecraft/Forge versions, reproduction steps and, if available, a screenshot or log. Get help on NeverGate Discord or the project page.

14 / Checks and limits

As of 17 October 2026: Vehicles dev12 and Traffic beta2-dev12 are loaded on MC02.

1. Vehicles: 129 server tests passed again. Traffic/Vehicles: 16 targeted integration tests, including state access for all eleven vehicle types.

2. Separate server processes confirm state/receipt persistence and replay protection; actual chunk unloading and return were checked.

3. Historical client and two-client evidence applies to its documented builds. All dev12 features with two real drivers and every semitrailer parking geometry still need testing.

4. Electric drive and economy provider are missing. Paid external fuel/charging/wash services remain blocked.

5. Author: NeverGate. Existing rights notices remain in force; original data and recipes come from the current JARs.

15 / Parking zones, sensors and barriers

Use the display linker to connect parking devices to the traffic and parking controller.

1. Place the controller and parking devices. Select source and target with the display linker; check the connection in the device menu.

2. Configure a parking zone and capacity. Use either entry/exit counting or individual space sensors; verify the selected counting mode.

3. Configure barriers with vehicle filtering and clearance checks. Obstacles prevent closing. Clearance signs can be set from 1.5 to 6.5 m.

4. Zone aggregators and signs can reference a fixed or automatically selected available zone. Check live values in the controller menu.

5. Check specific vehicle types separately; drivers and passengers must not count as extra vehicles.

/ngverkehr vehiclecheck X Y Z

16 / Advanced road works

Right-click new devices from the NG · Road works tab with an empty hand.

1. Place the advance-warning trailer and select left/right/off. It is a stationary part, not a towable vehicle.

2. Running-light linker: select the first lamp, then click subsequent lamps in sequence. Up to 32 lights within 64 blocks. Sneak-click to select a new first light.

3. Set running/steady/off and speed. The group remains dark while members are unloaded.

4. Set time windows for barriers, arrow boards and light masts; equal start/end means all day. Extending gates occupy one to four blocks and check for obstacles.

5. Drive over cable/hose ramps and walk over temporary bridges. They do not automatically integrate protection for third-party cable mods.

6. Access gate: allow the creator and additional authorised players/vehicles. The gate does not prevent following through an already open entrance.

/ngverkehr workaccess X Y Z player Spielername true

/ngverkehr workaccess X Y Z vehicle Fahrzeug-UUID true

17 / Link traffic-operation devices

The traffic-operation linker connects dev8 devices.

1. Right-click a source, then a compatible target. Sneak-right-click to choose a new source.

2. Source and target must be in the same dimension and within 128 blocks.

3. Open device menus by right-clicking with an empty hand. Buttons apply immediately; connections can be removed there.

18 / Speed and congestion detection

Align sensors with the lane. Measurement follows the vehicle root entity.

1. Link the speed sensor to a display. Set a 5-130 km/h limit and an 8/16/32-block range. One block equals one metre.

2. Without a reading the display shows --; speeding is shown in red.

3. Congestion sensor defaults to at least three vehicles at up to 5 km/h for at least five seconds; count and duration are adjustable.

4. Connect congestion detection to a display controller, tunnel controller or diversion controller. The warning clears when congestion has subsided.

19 / Set up a level crossing

The controller, crossbucks, flashing lights and barriers form a linked system.

1. Link the level-crossing controller as source to all devices. Default detection range: 32 blocks.

2. Vanilla minecarts are detected. Explicitly mark third-party trains or configure their entity types.

3. Following startup checks and red prewarning, the barriers close; they reopen after a delay once the last train has passed.

4. Obstacles hold an open barrier open; they do not brake trains. Match sensor location and range to train speed.

/ngverkehr trafficmark <Zug-Auswahl> train true

20 / Bus and emergency priority

Only explicitly marked or configured vehicle types request priority.

1. Connect the bus or emergency sensor to a signal controller and choose group A/B.

2. Junction: A = north/south, B = east/west. Road-works alternating traffic: A = north/east, B = south/west. Pedestrian-only crossing: A only.

3. The safe sequence includes all-red, red-amber, exclusive green, amber and clearance time. Active pedestrian green is not cut short.

4. Emergency requests take precedence over waiting buses. Third-party siren activation is not automatically detected.

/ngverkehr trafficmark <Fahrzeug-Auswahl> bus true

/ngverkehr trafficmark <Fahrzeug-Auswahl> emergency true

/ngverkehr traffictypes X Y Z modname:fahrzeugtyp

21 / Tunnels and automatic diversions

The tunnel controller links barriers, lighting and lane indicators.

1. Link the tunnel controller to entry barriers, lighting and lane indicators. Select open/automatic, closed or fault mode.

2. Standby lighting turns on for closure, fault or missing connection. Disconnected lane indicators do not show an open lane.

3. Link a congestion sensor as source to the tunnel controller to close the tunnel automatically during congestion.

4. Link the tunnel controller or congestion sensor to a diversion controller, then link its signs. Select automatic/always active/off and configure direction/destination text.

5. The system switches prepared diversion signs. It does not calculate a road route.

/ngverkehr traffictext X Y Z Moers über Nebenstrecke

22 / Count traffic

The traffic counter measures actual crossings of its centre line.

1. Align the counter with a lane and check detection in its menu.

2. Both directions are counted separately; stationary vehicles and pedestrians are excluded.

3. Totals are saved. The last-minute estimate starts afresh after loading.

23 / Parking tickets, tariffs and exit

All ticket devices in a parking zone must refer to the same tariff computer.

1. Place tariff computer, entry dispenser, cashier and exit reader. Use the parking/service linker to connect each device as source to the tariff computer as target.

2. Also link the exit reader to the matching barrier. All counterparts must be loaded, in the same dimension and within 128 blocks.

3. Configure hourly rate, free minutes and daily cap. Without an economy provider, use a free tariff; do not release an exit as if payment succeeded.

4. Obtain an entry ticket, keep it in your inventory and pay or confirm its free fee at the cashier. Then use the exit reader.

5. Season passes are issued to one player and zone and can be revoked. A consumed ticket cannot be reused.

/ngservice tariff X Y Z 0 10 1500

/ngservice pass X Y Z Spielername

/ngservice revoke X Y Z Spielername

24 / Reservations, floors and faults

Add permissions and clear status displays to parking operations.

1. Assign a reservation bollard to a player and revoke the reservation when required. Check access and obstacles.

2. Link floor displays and height warnings to the traffic/parking controller. Check capacity and actual vehicle height.

3. Link dynamic speed control to a compatible trigger. Messages are guidance and do not automatically brake vehicles.

4. Link the fault monitor to watched devices. Missing or unloaded targets are not confirmed operational states.

/ngservice reserve X Y Z Spielername

/ngservice unreserve X Y Z

25 / Pedestrian, bicycle and ramp demand

Demand must match the signal program and assigned group.

1. Use the parking/service linker to connect a demand device to the signal controller and assign crossing/group A/B.

2. Connecting a new demand device safely stops the controller. Check assignments and deliberately restart it.

3. Right-click pedestrian demand normally; sneaking opens settings. Assign the audible beacon to the same crossing.

4. Use the bicycle sensor only for vehicles actually recognised as bicycles. Place ramp metering with a suitable release interval.

26 / Service devices, fuel and washing

Existing vehicle state is reused; there is no second fuel or dirt value.

1. Use the operations linker to select source and compatible target; sneak-click resets the source. Same dimension, loaded targets, a 128-block limit and edit permission are required.

2. Link pumps to the cashier and wash entry to the wash tunnel. Check vehicle access, range, space and state.

3. Free operations with Vehicles dev12 use its existing tank and dirt value. Only actually delivered fuel or cleaning counts as completed.

4. Saved operation receipts prevent duplicate service. Do not treat uncertain or aborted operations as successful.

5. Chargers manage connector/session state. They do not charge without an electric drivetrain. Paid external services remain blocked without economy integration.

27 / Cards, plates and delivery access

Access grants must belong to the actual player and vehicle.

1. Link a card or plate reader to the matching bollard. Set up delivery-zone time windows and access rules.

2. For plate access, place exactly one matching vehicle in front of the reader. Its existing plate is bound to vehicle and owner UUIDs.

3. Copied plates do not inherit access. Register again after an ownership change and replace older unbound plate lists.

4. Have only authorised administrators issue personal cards and revoke access that is no longer needed.

/ngbetrieb X Y Z kennzeichen NG-42

/ngbetrieb X Y Z karte Spielername

28 / Bus routes and stops

Vehicle route, controller, sensor and display must match.

1. Set route and destination in the NG city bus management. Configure the same route, destination and interval in the route controller.

2. Link stop display and arrival sensor to the route controller. Align the sensor with the actual stopping lane.

3. Monitor the display and local detection. Arrival information uses schedule and sensor state, not GPS route prediction.

/ngbetrieb X Y Z route Linie1 Moers Zentrum

29 / Warnings, emergency points and operations desk

Connect prepared alarm and display workflows.

1. Configure school warnings with suitable time windows and worksite exits with appropriate sensor placement.

2. Set weather warnings and manual visibility alarms as required. There is no universal actual-fog measurement.

3. Include tunnel emergency points and escape signs in the matching alarm workflow and check status/acknowledgement at the desk.

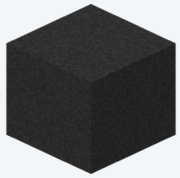

4. Messages and redstone warn but do not brake vehicles. Emergency calls stay in game; no external service is contacted.

Complete catalogue

350 registered items and blocks. Recipes come from mod resources; vehicle assembly costs come from the vehicle workbench.

1 × Blank sign panel
Output: 1

Face the sign towards approaching traffic. A decorative road sign; it does not control vehicles.

Road works warning sign

Stonecutter
1 × Iron block
Output: 1

Face the sign towards approaching traffic. A decorative road sign; it does not control vehicles.

Road narrows warning sign

Stonecutter
1 × Iron block
Output: 1

Face the sign towards approaching traffic. A decorative road sign; it does not control vehicles.

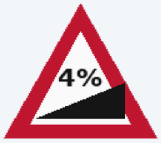

Sign 108-4 - Descent 4 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-4 - Descent 4 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-4 - Ascent 4 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-4 - Ascent 4 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-5 - Descent 5 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-5 - Descent 5 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-5 - Ascent 5 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-5 - Ascent 5 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-6 - Descent 6 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-6 - Descent 6 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-6 - Ascent 6 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-6 - Ascent 6 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-7 - Descent 7 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-7 - Descent 7 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-7 - Ascent 7 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-7 - Ascent 7 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-8 - Descent 8 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-8 - Descent 8 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-8 - Ascent 8 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-8 - Ascent 8 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-9 - Descent 9 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-9 - Descent 9 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-9 - Ascent 9 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-9 - Ascent 9 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-10 - Descent 10 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-10 - Descent 10 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-10 - Ascent 10 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-10 - Ascent 10 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-11 - Descent 11 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-11 - Descent 11 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-11 - Ascent 11 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-11 - Ascent 11 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-12 - Descent 12 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-12 - Descent 12 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-12 - Ascent 12 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-12 - Ascent 12 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-13 - Descent 13 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-13 - Descent 13 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-13 - Ascent 13 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-13 - Ascent 13 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-14 - Descent 14 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-14 - Descent 14 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-14 - Ascent 14 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-14 - Ascent 14 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-15 - Descent 15 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-15 - Descent 15 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-15 - Ascent 15 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-15 - Ascent 15 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-16 - Descent 16 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-16 - Descent 16 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-16 - Ascent 16 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-16 - Ascent 16 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-17 - Descent 17 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-17 - Descent 17 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-17 - Ascent 17 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-17 - Ascent 17 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-18 - Descent 18 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-18 - Descent 18 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-18 - Ascent 18 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-18 - Ascent 18 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-19 - Descent 19 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-19 - Descent 19 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-19 - Ascent 19 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-19 - Ascent 19 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-20 - Descent 20 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-20 - Descent 20 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-20 - Ascent 20 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-20 - Ascent 20 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-21 - Descent 21 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-21 - Descent 21 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-21 - Ascent 21 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-21 - Ascent 21 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-22 - Descent 22 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-22 - Descent 22 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-22 - Ascent 22 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-22 - Ascent 22 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-23 - Descent 23 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-23 - Descent 23 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-23 - Ascent 23 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-23 - Ascent 23 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-24 - Descent 24 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-24 - Descent 24 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-24 - Ascent 24 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-24 - Ascent 24 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 108-25 - Descent 25 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 108-25 - Descent 25 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 110-25 - Ascent 25 %

Stonecutter
1 × Blank sign panel
Output: 1

Sign 110-25 - Ascent 25 %: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 102 - Uncontrolled crossroads

Stonecutter
1 × Blank sign panel
Output: 1

Sign 102 - Uncontrolled crossroads: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 103-10 - Left curve

Stonecutter
1 × Blank sign panel
Output: 1

Sign 103-10 - Left curve: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 103-20 - Right curve

Stonecutter
1 × Blank sign panel
Output: 1

Sign 103-20 - Right curve: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 105-10 - Double curve, first left

Stonecutter
1 × Blank sign panel
Output: 1

Sign 105-10 - Double curve, first left: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 105-20 - Double curve, first right

Stonecutter
1 × Blank sign panel
Output: 1

Sign 105-20 - Double curve, first right: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 112 - Uneven road

Stonecutter
1 × Blank sign panel
Output: 1

Sign 112 - Uneven road: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 114 - Slippery road

Stonecutter
1 × Blank sign panel
Output: 1

Sign 114 - Slippery road: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 117-10 - Crosswind from the right

Stonecutter
1 × Blank sign panel
Output: 1

Sign 117-10 - Crosswind from the right: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 117-20 - Crosswind from the left

Stonecutter
1 × Blank sign panel
Output: 1

Sign 117-20 - Crosswind from the left: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 121-10 - Road narrows on the right

Stonecutter
1 × Blank sign panel
Output: 1

Sign 121-10 - Road narrows on the right: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 121-20 - Road narrows on the left

Stonecutter
1 × Blank sign panel
Output: 1

Sign 121-20 - Road narrows on the left: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 124 - Traffic queues

Stonecutter
1 × Blank sign panel
Output: 1

Sign 124 - Traffic queues: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 125 - Two-way traffic

Stonecutter
1 × Blank sign panel
Output: 1

Sign 125 - Two-way traffic: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 131 - Traffic signals

Stonecutter
1 × Blank sign panel
Output: 1

Sign 131 - Traffic signals: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 133-10 - Pedestrians, right-side placement

Stonecutter
1 × Blank sign panel
Output: 1

Sign 133-10 - Pedestrians, right-side placement: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 133-20 - Pedestrians, left-side placement

Stonecutter
1 × Blank sign panel
Output: 1

Sign 133-20 - Pedestrians, left-side placement: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 136-10 - Children, right-side placement

Stonecutter
1 × Blank sign panel
Output: 1

Sign 136-10 - Children, right-side placement: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 136-20 - Children, left-side placement

Stonecutter
1 × Blank sign panel
Output: 1

Sign 136-20 - Children, left-side placement: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 138-10 - Cyclists, right-side placement

Stonecutter
1 × Blank sign panel
Output: 1

Sign 138-10 - Cyclists, right-side placement: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 138-20 - Cyclists, left-side placement

Stonecutter
1 × Blank sign panel
Output: 1

Sign 138-20 - Cyclists, left-side placement: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 151 - Railway crossing

Stonecutter
1 × Blank sign panel
Output: 1

Sign 151 - Railway crossing: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Mandatory signs / 46

Sign 205 - Give way

Stonecutter
1 × Blank sign panel
Output: 1

Face towards the intended approach. The sign displays its instruction; it does not automatically steer vehicles.

Sign 206 - Stop / give way

Stonecutter
1 × Blank sign panel
Output: 1

Face towards the intended approach. The sign displays its instruction; it does not automatically steer vehicles.

Pass on the left sign

Stonecutter
1 × Iron block
Output: 1

Face towards the intended approach. The sign displays its instruction; it does not automatically steer vehicles.

Pass on the right sign

Stonecutter
1 × Iron block
Output: 1

Face towards the intended approach. The sign displays its instruction; it does not automatically steer vehicles.

Sign 275-10 - Minimum speed 10 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 275-10 - Minimum speed 10 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 279-10 - End of minimum speed 10 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 279-10 - End of minimum speed 10 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 275-20 - Minimum speed 20 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 275-20 - Minimum speed 20 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 279-20 - End of minimum speed 20 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 279-20 - End of minimum speed 20 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 275-30 - Minimum speed 30 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 275-30 - Minimum speed 30 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 279-30 - End of minimum speed 30 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 279-30 - End of minimum speed 30 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 275-40 - Minimum speed 40 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 275-40 - Minimum speed 40 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 279-40 - End of minimum speed 40 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 279-40 - End of minimum speed 40 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 275-50 - Minimum speed 50 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 275-50 - Minimum speed 50 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 279-50 - End of minimum speed 50 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 279-50 - End of minimum speed 50 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 275-60 - Minimum speed 60 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 275-60 - Minimum speed 60 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 279-60 - End of minimum speed 60 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 279-60 - End of minimum speed 60 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 275-70 - Minimum speed 70 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 275-70 - Minimum speed 70 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 279-70 - End of minimum speed 70 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 279-70 - End of minimum speed 70 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 275-80 - Minimum speed 80 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 275-80 - Minimum speed 80 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 279-80 - End of minimum speed 80 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 279-80 - End of minimum speed 80 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 275-90 - Minimum speed 90 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 275-90 - Minimum speed 90 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 279-90 - End of minimum speed 90 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 279-90 - End of minimum speed 90 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 275-100 - Minimum speed 100 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 275-100 - Minimum speed 100 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 279-100 - End of minimum speed 100 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 279-100 - End of minimum speed 100 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 275-110 - Minimum speed 110 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 275-110 - Minimum speed 110 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 279-110 - End of minimum speed 110 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 279-110 - End of minimum speed 110 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 275-120 - Minimum speed 120 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 275-120 - Minimum speed 120 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 279-120 - End of minimum speed 120 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 279-120 - End of minimum speed 120 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 275-130 - Minimum speed 130 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 275-130 - Minimum speed 130 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 279-130 - End of minimum speed 130 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 279-130 - End of minimum speed 130 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 209 - Turn right ahead

Stonecutter
1 × Blank sign panel
Output: 1

Sign 209 - Turn right ahead: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 209-10 - Turn left ahead

Stonecutter
1 × Blank sign panel
Output: 1

Sign 209-10 - Turn left ahead: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 209-30 - Ahead only

Stonecutter
1 × Blank sign panel
Output: 1

Sign 209-30 - Ahead only: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 211 - Turn right here

Stonecutter
1 × Blank sign panel
Output: 1

Sign 211 - Turn right here: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 211-10 - Turn left here

Stonecutter
1 × Blank sign panel
Output: 1

Sign 211-10 - Turn left here: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 214 - Ahead or right

Stonecutter
1 × Blank sign panel
Output: 1

Sign 214 - Ahead or right: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 214-10 - Ahead or left

Stonecutter
1 × Blank sign panel
Output: 1

Sign 214-10 - Ahead or left: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 214-30 - Left or right

Stonecutter
1 × Blank sign panel
Output: 1

Sign 214-30 - Left or right: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 215 - Roundabout

Stonecutter
1 × Blank sign panel
Output: 1

Sign 215 - Roundabout: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 237 - Cycle path

Stonecutter
1 × Blank sign panel
Output: 1

Sign 237 - Cycle path: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 239 - Footway

Stonecutter
1 × Blank sign panel
Output: 1

Sign 239 - Footway: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 240 - Shared pedestrian and cycle path

Stonecutter
1 × Blank sign panel
Output: 1

Sign 240 - Shared pedestrian and cycle path: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 241-30 - Separated path, cycles on left

Stonecutter
1 × Blank sign panel
Output: 1

Sign 241-30 - Separated path, cycles on left: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 241-31 - Separated path, cycles on right

Stonecutter
1 × Blank sign panel
Output: 1

Sign 241-31 - Separated path, cycles on right: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 220-10 - One-way street, left

Stonecutter
1 × Blank sign panel
Output: 1

Sign 220-10 - One-way street, left: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 220-20 - One-way street, right

Stonecutter
1 × Blank sign panel
Output: 1

Sign 220-20 - One-way street, right: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Prohibition signs / 56

Sign 250 - No vehicles

Stonecutter
1 × Blank sign panel
Output: 1

Place beside the road to display a restriction or its end. It does not automatically limit vehicle speed.

Sign 267 - No entry

Stonecutter
1 × Blank sign panel
Output: 1

Place beside the road to display a restriction or its end. It does not automatically limit vehicle speed.

Sign 274 - 30 km/h speed limit

Stonecutter
1 × Blank sign panel
Output: 1

Place beside the road to display a restriction or its end. It does not automatically limit vehicle speed.

Sign 274 - 50 km/h speed limit

Stonecutter
1 × Blank sign panel
Output: 1

Place beside the road to display a restriction or its end. It does not automatically limit vehicle speed.

Sign 274 - 80 km/h speed limit

Stonecutter
1 × Blank sign panel
Output: 1

Place beside the road to display a restriction or its end. It does not automatically limit vehicle speed.

Sign 274 - 100 km/h speed limit

Stonecutter
1 × Blank sign panel
Output: 1

Place beside the road to display a restriction or its end. It does not automatically limit vehicle speed.

Sign 274 - 120 km/h speed limit

Stonecutter
1 × Blank sign panel
Output: 1

Place beside the road to display a restriction or its end. It does not automatically limit vehicle speed.

End of restrictions sign

Stonecutter
1 × Iron block
Output: 1

Place beside the road to display a restriction or its end. It does not automatically limit vehicle speed.

Sign 274-5 - Speed limit 5 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 274-5 - Speed limit 5 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 278-5 - End of speed limit 5 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 278-5 - End of speed limit 5 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 274-10 - Speed limit 10 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 274-10 - Speed limit 10 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 278-10 - End of speed limit 10 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 278-10 - End of speed limit 10 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 274-20 - Speed limit 20 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 274-20 - Speed limit 20 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 278-20 - End of speed limit 20 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 278-20 - End of speed limit 20 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 278-30 - End of speed limit 30 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 278-30 - End of speed limit 30 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 274-40 - Speed limit 40 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 274-40 - Speed limit 40 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 278-40 - End of speed limit 40 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 278-40 - End of speed limit 40 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 278-50 - End of speed limit 50 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 278-50 - End of speed limit 50 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 274-60 - Speed limit 60 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 274-60 - Speed limit 60 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 278-60 - End of speed limit 60 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 278-60 - End of speed limit 60 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 274-70 - Speed limit 70 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 274-70 - Speed limit 70 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 278-70 - End of speed limit 70 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 278-70 - End of speed limit 70 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 278-80 - End of speed limit 80 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 278-80 - End of speed limit 80 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 274-90 - Speed limit 90 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 274-90 - Speed limit 90 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 278-90 - End of speed limit 90 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 278-90 - End of speed limit 90 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 278-100 - End of speed limit 100 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 278-100 - End of speed limit 100 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 274-110 - Speed limit 110 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 274-110 - Speed limit 110 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 278-110 - End of speed limit 110 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 278-110 - End of speed limit 110 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 278-120 - End of speed limit 120 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 278-120 - End of speed limit 120 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 274-130 - Speed limit 130 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 274-130 - Speed limit 130 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 278-130 - End of speed limit 130 km/h

Stonecutter
1 × Blank sign panel
Output: 1

Sign 278-130 - End of speed limit 130 km/h: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 251 - No motor cars

Stonecutter
1 × Blank sign panel
Output: 1

Sign 251 - No motor cars: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 253 - No heavy goods vehicles

Stonecutter
1 × Blank sign panel
Output: 1

Sign 253 - No heavy goods vehicles: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 254 - No cycling

Stonecutter
1 × Blank sign panel
Output: 1

Sign 254 - No cycling: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 255 - No motorcycles

Stonecutter
1 × Blank sign panel
Output: 1

Sign 255 - No motorcycles: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 259 - No pedestrians

Stonecutter
1 × Blank sign panel
Output: 1

Sign 259 - No pedestrians: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 260 - No motor vehicles

Stonecutter
1 × Blank sign panel
Output: 1

Sign 260 - No motor vehicles: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 272 - No U-turn

Stonecutter
1 × Blank sign panel
Output: 1

Sign 272 - No U-turn: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 276 - No overtaking

Stonecutter
1 × Blank sign panel
Output: 1

Sign 276 - No overtaking: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 277 - No overtaking by heavy goods vehicles

Stonecutter
1 × Blank sign panel
Output: 1

Sign 277 - No overtaking by heavy goods vehicles: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 280 - End of no overtaking

Stonecutter
1 × Blank sign panel
Output: 1

Sign 280 - End of no overtaking: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 281 - End of no overtaking by heavy goods vehicles

Stonecutter
1 × Blank sign panel
Output: 1

Sign 281 - End of no overtaking by heavy goods vehicles: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 283 - No stopping

Stonecutter
1 × Blank sign panel
Output: 1

Sign 283 - No stopping: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 283-10 - No stopping, begin, right side

Stonecutter
1 × Blank sign panel
Output: 1

Sign 283-10 - No stopping, begin, right side: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 283-11 - No stopping, end, left side

Stonecutter
1 × Blank sign panel
Output: 1

Sign 283-11 - No stopping, end, left side: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 283-20 - No stopping, end, right side

Stonecutter
1 × Blank sign panel
Output: 1

Sign 283-20 - No stopping, end, right side: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 283-21 - No stopping, begin, left side

Stonecutter
1 × Blank sign panel
Output: 1

Sign 283-21 - No stopping, begin, left side: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 283-30 - No stopping, middle, right side

Stonecutter
1 × Blank sign panel
Output: 1

Sign 283-30 - No stopping, middle, right side: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 283-31 - No stopping, middle, left side

Stonecutter
1 × Blank sign panel
Output: 1

Sign 283-31 - No stopping, middle, left side: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 286 - No parking

Stonecutter
1 × Blank sign panel
Output: 1

Sign 286 - No parking: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 286-10 - No parking, begin, right side

Stonecutter
1 × Blank sign panel
Output: 1

Sign 286-10 - No parking, begin, right side: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 286-11 - No parking, end, left side

Stonecutter
1 × Blank sign panel
Output: 1

Sign 286-11 - No parking, end, left side: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 286-20 - No parking, end, right side

Stonecutter
1 × Blank sign panel
Output: 1

Sign 286-20 - No parking, end, right side: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 286-21 - No parking, begin, left side

Stonecutter
1 × Blank sign panel
Output: 1

Sign 286-21 - No parking, begin, left side: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 286-30 - No parking, middle, right side

Stonecutter
1 × Blank sign panel
Output: 1

Sign 286-30 - No parking, middle, right side: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 286-31 - No parking, middle, left side

Stonecutter
1 × Blank sign panel
Output: 1

Sign 286-31 - No parking, middle, left side: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Information signs / 10

Sign 306 - Priority road

Stonecutter
1 × Blank sign panel
Output: 1

Place visibly beside the road or parking area and face approaching traffic.

Sign 314 - Parking

Stonecutter
1 × Blank sign panel
Output: 1

Place visibly beside the road or parking area and face approaching traffic.

Sign 307 - End of priority road

Stonecutter
1 × Blank sign panel
Output: 1

Sign 307 - End of priority road: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 308 - Priority over oncoming traffic

Stonecutter
1 × Blank sign panel
Output: 1

Sign 308 - Priority over oncoming traffic: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 350-10 - Pedestrian crossing, right-side placement

Stonecutter
1 × Blank sign panel
Output: 1

Sign 350-10 - Pedestrian crossing, right-side placement: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 350-20 - Pedestrian crossing, left-side placement

Stonecutter
1 × Blank sign panel
Output: 1

Sign 350-20 - Pedestrian crossing, left-side placement: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 330.1 - Motorway

Stonecutter
1 × Blank sign panel
Output: 1

Sign 330.1 - Motorway: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 330.2 - End of motorway

Stonecutter
1 × Blank sign panel
Output: 1

Sign 330.2 - End of motorway: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 331.1 - Motor vehicle road

Stonecutter
1 × Blank sign panel
Output: 1

Sign 331.1 - Motor vehicle road: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Sign 331.2 - End of motor vehicle road

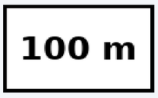

Stonecutter
1 × Blank sign panel
Output: 1

Sign 331.2 - End of motor vehicle road: fixed sign variant. Place and orient towards approaching traffic. Provides signage; does not automatically enforce traffic rules.

Supplementary signs / 1

Supplementary sign 1004-30 - Distance in metres

Stonecutter
1 × Blank sign panel
Output: 1

Place in a separate block position below a suitable main sign. This variant has fixed text.

Signals and accessories / 19

Vehicle traffic signal

Stonecutter
1 × Iron block
Output: 1

Link to a controller with the signal linking tool. Check the approach and movement in the device menu, then start.

Left-turn signal

Stonecutter
1 × Iron block
Output: 1

Link to a controller with the signal linking tool. Check the approach and movement in the device menu, then start.

Right-turn signal

Stonecutter
1 × Iron block
Output: 1

Link to a controller with the signal linking tool. Check the approach and movement in the device menu, then start.

Straight-ahead signal

Stonecutter
1 × Iron block
Output: 1

Link to a controller with the signal linking tool. Check the approach and movement in the device menu, then start.

Straight / left signal

Stonecutter
1 × Iron block
Output: 1

Link to a controller with the signal linking tool. Check the approach and movement in the device menu, then start.

Straight / right signal

Stonecutter
1 × Iron block
Output: 1

Link to a controller with the signal linking tool. Check the approach and movement in the device menu, then start.

Left / right signal

Stonecutter
1 × Iron block
Output: 1

Link to a controller with the signal linking tool. Check the approach and movement in the device menu, then start.

All-directions signal

Stonecutter
1 × Iron block
Output: 1

Link to a controller with the signal linking tool. Check the approach and movement in the device menu, then start.

Cycle signal

Stonecutter
1 × Iron block
Output: 1

Link to a controller with the signal linking tool. Check the approach and movement in the device menu, then start.

Yellow warning flasher

Stonecutter
1 × Iron block
Output: 1

Link to a controller. Flashes yellow while the controller is running and is off when stopped. It does not grant a movement permission.

Pedestrian signal

Stonecutter
1 × Iron block
Output: 1

Link to the controller and assign crossing A or B. Buttons assigned to that crossing request its green phase.

Pedestrian request button

Stonecutter
1 × Iron block
Output: 1

Mount on the side of an NG signpost or reinforced signal pole, then assign it to the same crossing as its pedestrian signal. Right-click to request green.

Traffic signal controller

Stonecutter
1 × Iron block
Output: 1

Right-click with an empty hand to open the menu. Sneak + right-click to start/stop. One controller operates multiple linked signals.

Signal linking tool

Crafting table
1 × Redstone · 3 × Iron ingot · 1 × Copper ingot
Output: 1
Grid: ·R· / ICI / ·I·
R=Redstone; I=Iron ingot; C=Copper ingot

Click the controller first, then a signal. Normal linking selects A; sneak-linking selects B. Sneak-click a ground block to set the automatic centre.

Reinforced signal pole

Stonecutter
1 × Iron block
Output: 1

Separate mounting part. Build the pole, orient its arm connection and sections, then place a signal under the end hanger. No electrical cable connection is required.

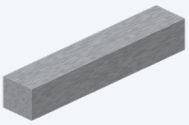

Signal pole with arm connection

Stonecutter
1 × Iron block
Output: 1

Separate mounting part. Build the pole, orient its arm connection and sections, then place a signal under the end hanger. No electrical cable connection is required.

Signal arm - straight section

Stonecutter
1 × Iron block
Output: 1

Separate mounting part. Build the pole, orient its arm connection and sections, then place a signal under the end hanger. No electrical cable connection is required.

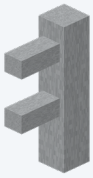

Signal arm - end with hanger

Stonecutter
1 × Iron block
Output: 1

Separate mounting part. Build the pole, orient its arm connection and sections, then place a signal under the end hanger. No electrical cable connection is required.

Signal mounting bracket

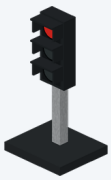

Stonecutter
1 × Iron block
Output: 1

Separate mounting part. Build the pole, orient its arm connection and sections, then place a signal under the end hanger. No electrical cable connection is required.

Road works / 30

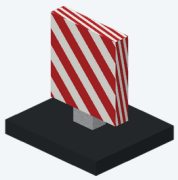

Portable traffic signal with base

Shapeless
1 × Vehicle traffic signal · 1 × Road works base plate · 1 × Iron ingot
Output: 1

Leave two free block spaces above each other. Link either the head or the base. In the road works program assign opposing ends to different groups.

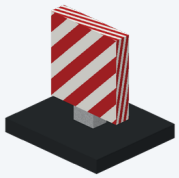

Road works delineator - left

Stonecutter
1 × Iron block
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

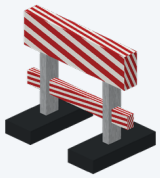

Road works delineator - right

Stonecutter
1 × Iron block
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

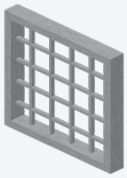

Red / white road barrier

Stonecutter
1 × Iron block
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

Construction fence panel

Stonecutter
1 × Iron block
Output: 1

Place mesh panels side by side. Stack two panels vertically for a tall construction fence.

Road works base plate

Stonecutter
1 × Iron block
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

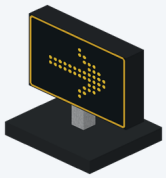

Road works lamp - steady / flashing

Shapeless
1 × Iron ingot · 1 × Glowstone dust · 1 × Yellow dye
Output: 1

Standalone: right-click cycles flashing > off > steady > flashing. No controller link required.

Flashing arrow board - left / right

Shapeless
1 × Iron ingot · 1 × Glowstone dust · 1 × Yellow dye · 1 × Redstone · 1 × Road works base plate
Output: 1

Standalone: right-click cycles left > right > off > left. Directions are as viewed from the front; the arrow flashes yellow.

Solid yellow line

Stonecutter
1 × Asphalt
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

Broken yellow line

Stonecutter
1 × Asphalt
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

Yellow double line

Stonecutter
1 × Asphalt
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

Yellow short dashes

Stonecutter
1 × Asphalt
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

Yellow straight-ahead arrow

Stonecutter
1 × Asphalt
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

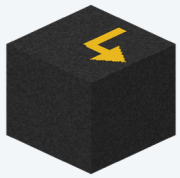

Yellow left arrow

Stonecutter
1 × Asphalt
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

Yellow right arrow

Stonecutter
1 × Asphalt
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

Yellow straight / left arrow

Stonecutter
1 × Asphalt
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

Yellow straight / right arrow

Stonecutter
1 × Asphalt
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

Yellow hatched area

Stonecutter
1 × Asphalt
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

Yellow curved guide line - left

Stonecutter
1 × Asphalt
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

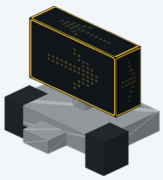

Yellow curved guide line - right

Stonecutter
1 × Asphalt
Output: 1

Combine with delineators, barriers and yellow markings to build a road works layout.

Advance warning trailer

Shapeless
1 × Minecart · 1 × Flashing arrow board - left / right
Output: 1

Place the stationary warning trailer; choose left/right/off and optional time window in its menu. Not drivable or towable.

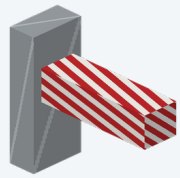

Sequential warning lamp

Shapeless
1 × Road works lamp - steady / flashing · 1 × Redstone
Output: 1

Use the running-light linker to sequence up to 32 lamps; select running, steady, off and speed.

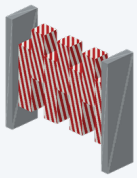

Scheduled worksite barrier

Shapeless
1 × Red / white road barrier · 1 × Clock
Output: 1

Set an operating time window. The barrier has physical collision and will not close onto obstacles.

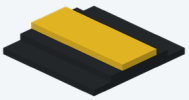

Extending worksite gate

Shapeless
1 × Iron bars · 1 × Iron ingot · 1 × Chain
Output: 1

Extend to occupy one to four blocks through its menu. Obstacles are checked.

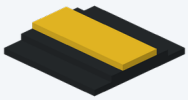

Drive-over cable protector

Shapeless
1 × Black carpet · 1 × Yellow dye
Output: 1

Place this low cable ramp on the road and drive over it. No automatic protection integration for third-party cables.

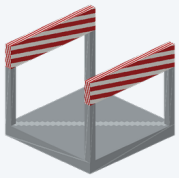

Drive-over hose protector

Shapeless
1 × Black carpet · 1 × Blue dye
Output: 1

Place this low hose ramp as a drivable crossing. No automatic integration with third-party hose mods.

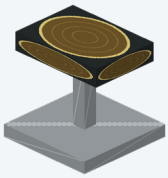

Pedestrian temporary bridge

Shapeless
1 × Iron bars · 1 × Oak planks
Output: 1

Combine walkable platform sections with side rails into a temporary pedestrian route.

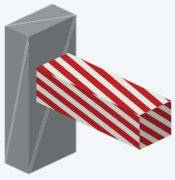

Portable lighting mast

Shapeless
1 × Iron ingot · 1 × Glowstone
Output: 1

Light mast with light level 15; switch through its menu or use a time window.

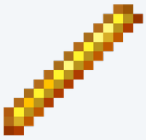

Worksite access gate

Shapeless
1 × Red / white road barrier · 1 × Tripwire hook
Output: 1

Access for the creator and authorised players/vehicle UUIDs. Configure access and allow for obstacle protection.

Worksite running light linker

Shapeless
1 × Stick · 1 × Yellow dye · 1 × Redstone
Output: 1

Click the first lamp, then further lamps in sequence. Sneak-click to set a new first source.

Digital displays / 14

Digital text display

Stonecutter
1 × Iron block
Output: 1

Command: /ngverkehr text <x> <y> <z> <text>. Up to 64 characters, saved. There is no dedicated display menu yet.

Parking availability display

Stonecutter
1 × Iron block
Output: 1

Command: /ngverkehr parking <x> <y> <z> <capacity> <occupied>. Shows free spaces or BESETZT (full). Automatic vehicle counting is not available yet.

Traffic and parking controller

Shapeless
1 × Redstone comparator · 1 × Iron ingot
Output: 1

Connect using the traffic/parking controller and display linker. Configure/check zone, mode and live values in the device menu.

Variable traffic sign

Shapeless
1 × Redstone lamp · 1 × Redstone
Output: 1

Connect using the traffic/parking controller and display linker. Configure/check zone, mode and live values in the device menu.

Lane control sign

Shapeless
1 × Variable traffic sign · 1 × Green dye
Output: 1

Connect using the traffic/parking controller and display linker. Configure/check zone, mode and live values in the device menu.

Parking direction sign

Shapeless
1 × Road direction sign · 1 × Blue dye
Output: 1

Connect using the traffic/parking controller and display linker. Configure/check zone, mode and live values in the device menu.

Parking availability board

Shapeless
1 × Parking direction sign · 1 × Glowstone dust
Output: 1

Connect using the traffic/parking controller and display linker. Configure/check zone, mode and live values in the device menu.

Entry counter

Shapeless
1 × Heavy weighted pressure plate · 1 × Green dye
Output: 1

Connect using the traffic/parking controller and display linker. Configure/check zone, mode and live values in the device menu.

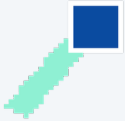

Exit counter

Shapeless
1 × Entry counter · 1 × Red dye
Output: 1

Connect using the traffic/parking controller and display linker. Configure/check zone, mode and live values in the device menu.

Display linker

Shapeless
1 × Signal linking tool · 1 × Blue dye
Output: 1

Connect using the traffic/parking controller and display linker. Configure/check zone, mode and live values in the device menu.

Parking zone aggregator

Crafting table
4 × Iron ingot · 4 × Redstone · 1 × Traffic and parking controller
Output: 1
Grid: IRI / RCR / IRI
I=Iron ingot; R=Redstone; C=Traffic and parking controller

Connect using the traffic/parking controller and display linker. Configure/check zone, mode and live values in the device menu.

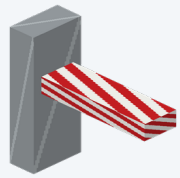

Parking space sensor

Shapeless
1 × Entry counter · 1 × Redstone comparator
Output: 1

Assign to a parking space and zone. Detects a vehicle rather than counting its driver and passengers separately.

Automatic parking barrier

Shapeless
1 × Iron door · 1 × Traffic and parking controller
Output: 1

Link to a parking zone; configure vehicle filter, clearance and occupancy rules. Obstacles prevent closing.

Adjustable height clearance sign

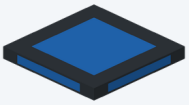

Shapeless
1 × Parking availability board · 1 × Red dye
Output: 1

Set permitted clearance from 1.5 to 6.5 metres in the menu.

Traffic operations / 17

Speed detector

Shapeless
1 × Redstone comparator · 1 × Iron ingot · 1 × Redstone
Output: 1

Align with the lane and link to a speed display. Limit 5-130 km/h; range 8/16/32 blocks.

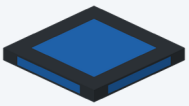

Speed display

Shapeless
1 × Digital text display · 1 × Redstone comparator
Output: 1

Connect to a speed sensor. Displays km/h, speeding in red and -- when no reading is available.

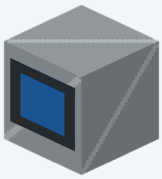

Queue detector

Shapeless
1 × Entry counter · 1 × Clock
Output: 1

Monitor a three-block-wide lane. Configure vehicle count/duration and connect to displays, tunnel or diversion.

Rail crossing controller

Shapeless
1 × Traffic and parking controller · 1 × Rail
Output: 1

Connect crossbucks, flashing lights and barriers. Detects minecarts and marked/configured trains.

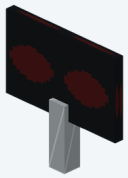

Railway crossbuck

Shapeless
1 × Signpost · 1 × Red dye · 1 × White dye
Output: 1

Place at a level crossing and link to its controller.

Rail crossing warning light

Shapeless
1 × Road works lamp - steady / flashing · 1 × Red dye · 1 × Rail
Output: 1

Link to the level-crossing controller; flashes during prewarning and closure.

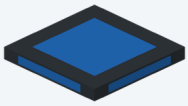

Rail crossing barrier

Shapeless
1 × Red / white road barrier · 1 × Rail
Output: 1

Link to the crossing controller. Obstacles hold an open barrier open; trains do not brake automatically.

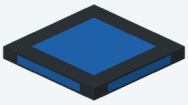

Bus priority detector

Shapeless
1 × Entry counter · 1 × Blue dye · 1 × Clock
Output: 1

Connect to a signal controller, select A/B and mark buses or configure their entity types.

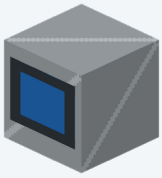

Emergency priority detector

Shapeless
1 × Entry counter · 1 × Red dye · 1 × Clock
Output: 1

Connect to a signal controller and register emergency vehicles. Safe priority takes precedence over waiting buses.

Tunnel controller

Shapeless
1 × Traffic and parking controller · 1 × Lantern
Output: 1

Link barriers, lights and lane indicators. Select open/automatic, closed or fault; congestion input is optional.

Tunnel entrance barrier

Shapeless
1 × Red / white road barrier · 1 × Lantern
Output: 1

Physically close a tunnel entrance. Link to its controller and match the road width.

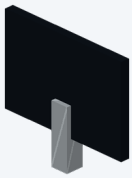

Tunnel lighting

Shapeless
1 × Lantern · 1 × Iron ingot · 1 × Redstone
Output: 1

Connect to the tunnel controller. Standby turns on automatically during closure, fault or loss of connection.

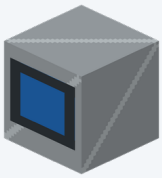

Tunnel lane display

Shapeless
1 × Lane control sign · 1 × Lantern
Output: 1

Connect to the tunnel controller. No lane is shown open without a valid connection.

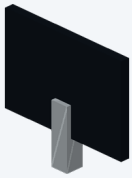

Detour controller

Shapeless
1 × Traffic and parking controller · 1 × Yellow dye · 1 × Clock
Output: 1

Link a tunnel or congestion sensor as source, assign signs and choose automatic/always active/off.

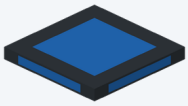

Automatic detour guide

Shapeless
1 × Diversion sign · 1 × Redstone
Output: 1

Connect to a diversion controller; display the configured direction and destination while active.

Traffic counter

Shapeless
1 × Entry counter · 1 × Paper · 1 × Redstone comparator
Output: 1

Align with the lane. Counts crossings in both directions; totals are saved.

Traffic operations linker

Shapeless
1 × Stick · 1 × Blue dye · 1 × Redstone
Output: 1

Click a source and compatible target in the same dimension within 128 blocks. Sneak-click selects a new source.

Parking tickets and service devices / 18

Parking meter

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Paper
Output: 1

Link to the parking tariff computer. Select a parking duration and confirm. A valid ticket requires a confirmed payment or a free tariff.

Entry ticket dispenser

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Tripwire hook
Output: 1

Link to the parking zone tariff computer. Obtain a personal entry ticket at the device and keep it until departure.

Parking payment terminal

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Gold ingot
Output: 1

Use the same tariff computer as entry and exit. Keep the ticket in your inventory, check the fee and confirm payment. Without an economy provider, only free tariffs work.

Exit ticket reader

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Ender pearl
Output: 1

Link to the tariff computer and exit barrier. Your valid ticket or matching season pass opens the exit; another player’s or a consumed ticket is rejected.

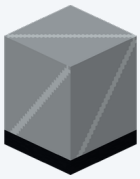

Parking tariff and traffic computer

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Book
Output: 1

Parking zone controller for hourly rate, free minutes and daily cap. Link all ticket devices in the zone to this computer. Amounts use euro cents internally.

Reserved parking bollard

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Iron bars
Output: 1

Reserve a parking space for a player and manage access. The bollard checks obstacles; ticket exits require matching reader and tariff zone.

Parking floor display

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Oak sign
Output: 1

Link to the traffic/parking controller to display available spaces or the assigned zone state. Unloaded counterparts are unknown.

Height advance warning

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Ladder
Output: 1

Link to the parking controller and set clearance. Warn about detected over-height vehicles and display an alternative route message; the warning does not brake vehicles.

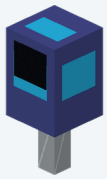

Pedestrian demand signal

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Stone button
Output: 1

Link to a signal controller and assign crossing A/B. A normal right-click requests a safe pedestrian phase; sneaking opens settings.

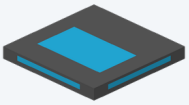

Acoustic pedestrian beacon

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Note block
Output: 1

Link to the signal controller and select the matching crossing. The audible beacon follows the actual pedestrian phase.

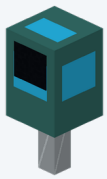

Bicycle demand detector

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Leather
Output: 1

Place in the cycle lane, link to the signal controller and choose a group. Vehicles marked as bicycles request a phase; motorcycles are not automatically bicycles.

Demand bicycle signal

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Green dye
Output: 1

Link to the signal controller and assign the correct group. Green follows the protected demand sequence; check connections after changes.

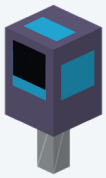

Dynamic speed control

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Clock
Output: 1

Link to the traffic/parking controller and a compatible congestion, tunnel or road-works trigger. Set limit and mode. The display does not brake vehicles.

Ramp metering signal

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Rail
Output: 1

Orient at the entry ramp. Set release interval and group, then monitor traffic. The meter supplies signals; it does not control vehicles directly.

Central fault monitor

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Redstone comparator · 1 × Redstone lamp
Output: 1

Link monitored devices. Monitor up to 64 counterparts; missing or unloaded devices are treated as faults or unknown.

Parking and service linker

Shapeless
1 × Iron nugget · 1 × Blue dye · 1 × Redstone
Output: 1

Click the parking/service source, then a compatible target. Sneak-click selects a new source. Same dimension, at most 128 blocks and suitable edit permission are required.

Parking ticket

Issued by device

Issued by the associated device; no crafting-table recipe.
Output: 1

Personal receipt from an entry dispenser or parking meter. Keep it in your inventory for the matching cashier/exit. The server checks owner, zone and validity; no crafting recipe.

Parking season pass

Issued by device

Issued by the associated device; no crafting-table recipe.
Output: 1

Season pass for one parking zone and player. Issued by an administrator, revocable and non-transferable; no crafting recipe.

Service devices and operations centre / 22

EV charger

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Blue wool
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Blue wool

Link to a charging park controller to manage connector and session state. No energy is transferred without an electric-vehicle adapter; the NG-Fahrzeuge starter battery is not a traction battery.

Charging park controller

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Oak fence gate
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Oak fence gate

Monitor linked chargers and sessions. Shared power-budget allocation is not included. Actual charging remains blocked without an electric-vehicle counterpart.

Fuel pump

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Chest
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Chest

Link to the station cashier and assign an authorised vehicle. Vehicles dev12 uses its existing tank; the actually delivered amount is confirmed and saved.

Fuel station cashier

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Spyglass
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Spyglass

Link fuel pumps and monitor service operations. Confirmed free operations are supported; paid external services require the economy integration that is still missing.

Car wash entry

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Glass
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Glass

Link to a wash tunnel. Check an authorised vehicle at the entrance and start a permitted wash. An aborted operation must not clean the vehicle.

Wash tunnel

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Bell
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Bell

Link to the entry/service controller and keep room for the vehicle. Follow program and progress; cleaning uses the actual vehicle mod dirt value.

Retractable road bollard

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Tripwire hook
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Tripwire hook

Place in an entrance and link a compatible reader or delivery-zone controller. Check access permissions; obstacles prevent unsafe raising.

Access card reader

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Gold ingot
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Gold ingot

Link to a bollard. Authorised administrators issue or revoke personal access cards. A card does not impersonate another player.

License plate reader

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Book
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Book

Link to a bollard. Register the actual vehicle with its matching plate in front of the reader. Access binds plate, vehicle UUID and owner UUID.

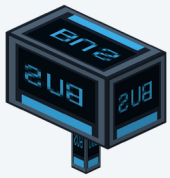

Delivery zone controller

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Piston
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Piston

Configure delivery-zone time windows and access permissions, then link the matching bollard. Access is not granted outside the allowed state.

Bus stop display

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Copper ingot
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Copper ingot

Link to a bus route controller. Show route, destination and next scheduled arrival; there is no GPS-based vehicle-position prediction.

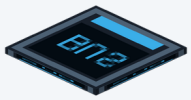

Bus route controller

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Nether quartz
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Nether quartz

Manage route, destination and interval and link displays/sensors. Matching uses the actual NG-Fahrzeuge bus route.

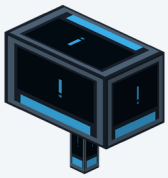

Bus arrival sensor

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Bucket
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Bucket

Place in the stop area, align to the lane and link to the bus route controller. Verify detection and matching route assignment.

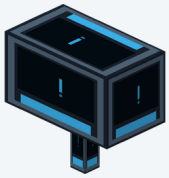

School crossing warning

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Yellow wool
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Yellow wool

Configure school-route time windows. The warning signals its active state visually or through redstone; it does not force braking.

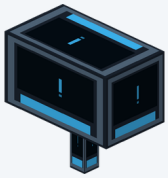

Worksite exit warning

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Redstone comparator
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Redstone comparator

Align at the worksite exit and check vehicle detection. Detected departures trigger the warning; build the traffic layout appropriately.

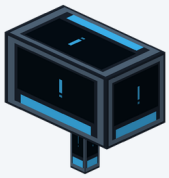

Weather warning

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Green wool
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Green wool

Configure weather-dependent warnings and monitor output. It reacts to supported world-weather states, not measurements from external weather mods.

Visibility warning controller

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Water bucket
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Water bucket

Configure a manual visibility alarm and weather response. Minecraft provides no universal fog measurement; this controller switches warning states.

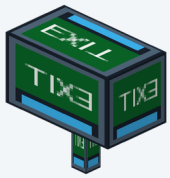

Tunnel emergency call

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Orange wool
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Orange wool

Place an emergency point, link it to the operations desk and trigger/acknowledge the in-game alarm. No real external emergency call is sent.

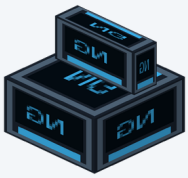

Escape route sign

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Paper
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Paper

Link to the compatible tunnel/alarm workflow and set direction. The sign displays a prepared escape direction; it does not calculate an evacuation route.

Traffic operations desk

Crafting table
7 × Iron ingot · 1 × Redstone · 1 × Glowstone dust
Output: 1
Grid: III / IRI / IBI
I=Iron ingot; R=Redstone; B=Glowstone dust

Link service devices and monitor their status and collective alarm. Do not treat unloaded or missing counterparts as operational.

Operations device linker

Shapeless
1 × Iron ingot · 1 × Redstone · 1 × Stick
Output: 1

Select a service device as source and click a compatible target. Sneak-click resets the source. Both devices must be loaded, in the same dimension and within 128 blocks.

Personal access card

Issued by device

Issued by the associated device; no crafting-table recipe.
Output: 1

Personal, revocable access card. Have an authorised administrator issue it at a card reader and use it at the matching entrance; no crafting recipe.
